## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arora et al. (2003/0195780) in view of Lewis (6,513,019).

Arora et al. shows all of the limitations of the claims except for specifying an error notification.

Arora et al. shows a computer-based optimization system for financial performance management.

Step 1 - Paragraph [0048] The economic database 250 includes fixed assets to be included in the "what if/optimization" scenario (transaction).

Step 2 - Paragraph [0051] shows providing data elements, which describe things like legal entities, tax rules and jurisdictions that are to be modeled. (The system requires certain data, which qualifies as queries.) Paragraph [0048] shows a regulatory database 248 containing jurisdiction tax laws. (Each tax law has criteria as to what is taxable. The jurisdiction is the location and the category is the type of asset taxable.)

Step 3 – If a fixed asset described above has an applicable tax law, it meets the criteria. The applicable tax calculation (audit) is performed for each applicable location. See the

example in paragraph [0004], which weighs allocations in Nevada versus California.

(This is running data to determine a location.)

Step 4 – The decision of the business entity doing the “what if/optimization” process will assign a location on their tax forms. (In whichever jurisdiction they filed in.)

The reference is silent to error notification.

As for hierarchically order, this is incorporated in tax laws. For example, Nevada does not have state tax. There would be no data required (queries) for state taxes once Nevada was entered.

Lewis teaches a financial consolidation and communication platform. In column 17, lines 23-33, the validation process teaches creating an error message in response to missing data in order that the situation be addressed by the appropriate staff.

Based on the teaching of Lewis, it would have been obvious to one of ordinary skill in the art, at the time the invention was made, to modify the Arora et al. system to incorporate an error notification when data was missing or not matching in order that the situation be addressed by the appropriate operator.

### ***Response to Arguments***

Applicant's arguments with respect to all claims have been considered but are moot in view of the new ground(s) of rejection.
